

DATAMATRIX CASEIN LABEL

A new tool for production management and traceability, the casein labels printed with a 2D code (Datamatrix) meet your needs in terms of ease of implementation and low cost of use.

The positioning of the codes on the label and the print contrast provide a 100% read on all rind cheeses not having an excessive development of flora.

The Datamatrix code allows tens of numeric and alphanumeric characters to be integrated, is not very sensitive to dimensional distortion and can be read even if the label is damaged.

APPLICATIONS

Starting with the design and supplying of the identifiers meeting your specific needs, up to computerized management of the data, covering industrial readers along the way, LABELYS is able to help you in the development of complete solutions providing the means of:

- ♦ Keeping track of and managing production in your facilities.
- ♦ Determining the stock situation and obtaining an instantaneous inventory.
- ♦ Reading and processing any information useful for proper management of the production tools.
