

CASEIN LABEL WITH PLASTIC RING

LABELYS offers you an innovative marking tool for combining the advantages of the conventional casein label (impossible to falsify) with the latest optical-marking technologies (1D bar codes, 2D codes, ...).

The casein label thus ensures that the identifier will be perfectly maintained on the cheese.

Depending on your needs, we can use laser printing to show your data, or else leave you the possibility of placing an adhesive label on the food-compatible plastic ring yourself and thus managing your stock as closely as possible.

The ring remains legible regardless of the type of cheese concerned by the marking.

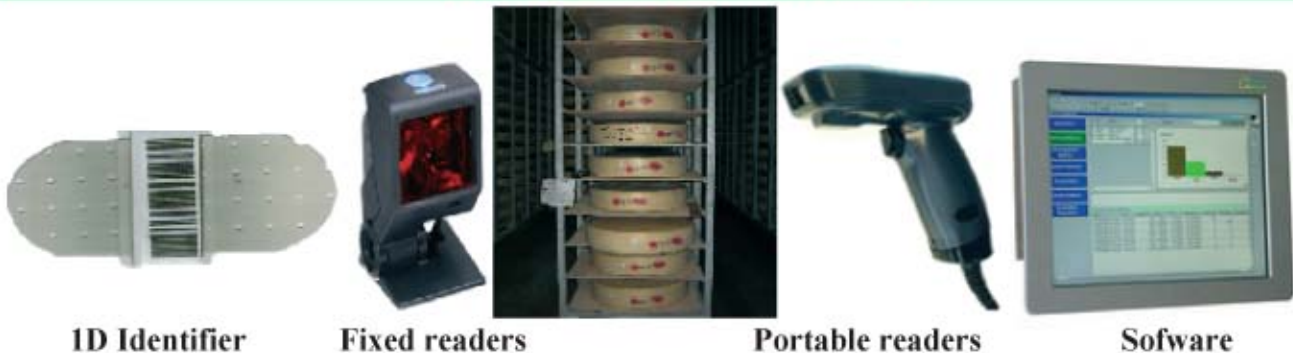

APPLICATIONS

Starting with the design and supplying of the identifiers meeting your specific needs, up to computerized management of the data, covering industrial readers along the way, LABELYS is able to help you in the development of complete solutions providing the means of:

- ♦ Keeping track of and managing production in your facilities.
- ♦ Determining the stock situation and obtaining an instantaneous inventory.
- ♦ Reading and processing any information useful for proper management of the production tools.

HIGH PERFORMANCE TOOLS

1D Identifier

Fixed readers

Portable readers
